

Christmas Tree Care

When Your Tree Arrives: Immediately place your tree in water. Do not allow tree to go without water for more than an hour.

Days 1 – 3: Water ONCE a day for the first 3 days. Water again on day 5 and then EVERY OTHER DAY. Do not allow your tree run out of water!!

Tree Placement: Choose an area away from heat sources including vents, fireplaces, portable heaters, and direct sunlight.

Daily care: Close your blinds and curtains during the day to protect your tree from additional heat and sun exposure. Heat and sunlight will shorten your tree's life. Keeping your home temperature cool will also slow the drying process and help your tree stay fresh all season.

Mark the calendar to water your tree the first three days after purchase then every other day through the season!

Scan this code with your phone's camera for our web site. tree care tips and more!
